

Media Services Plan

Purpose

The purpose of the media services plan is to ensure that adequate library and other learning resources and services are available to all faculty members and enrolled students.

Scope of Services

The scope of services include the support of faculty and students in meeting the objectives of each program, the enhancement of the educational programs, by providing faculty and students additional resource materials to be used as learning tools, and tools to aid students in their job preparation.

Educational Materials

This facility contains audio/visual resources, books and subscriptions to journals, as well as a 2345 sq.ft. library working area which contains a work area which holds 40 new laptops. In addition there exists a work area with computers, printer and table for students to study. We have access to LIRN which is an online library with information resources and we have a second online library, named OliB.

The room has a sitting capacity of 40 students with 40 lap tops, plus a sitting capacity for the librarian with one computer. In addition, we have a selection of reference books, and newspapers available to the students and faculty.

Learning resources are readily available to both students and faculty. A complete list of our materials is reflected in our Inventory.

Staff Persons and Roles

The media services are implemented, coordinated and supervised by the Dean of Academic Affairs. Learning resources are readily available to both students and faculty.

Librarian is responsible for opening and closing the resource room when students or faculty request to use it on Tuesdays and Fridays 11 am to 4 pm. At any other time Dean will assign Library Assistant to oversee the opening and closing of library.

College faculty attends seminars and or continuing education classes specific to their area of expertise in the library area.

Facilities

The facility is set up as a resource room which measures 2345 sq.ft. and is located on the 2nd floor of the school. This facility contains audio/visual resources, books as well as an area which holds 40 computers and two online libraries: LIRN and OliB. The resource room has a sitting capacity of 40 students, the study area built contiguous to this room sits six students and lap top computer access.

SABER conducts periodic staff meetings, to assess the need for funds in the various departments. This needs assessment includes the resource room. Upon identifying a need

in a specific learning area, be it the result of the development of a new program, or the updating of resource materials, the administrative staff approves the allocation of funds for the specific area, and instructs the staff to make available to the students the approved resources.

Methodology

1. At the beginning of each new program students are given a general orientation which includes information and hours about our resource room and library work area.
2. The room is kept locked except for T-Fri from 11 am - 4 pm and students and/or faculty may request access/use anytime during school hours from the librarian or Dean
3. Student must sign in and they must sign out to ascertain attendance
4. Students have access to LIRN and OLiB from their homes.
5. After the student has used the facility the room is once again locked. If a student needs assistance in looking for a book or with the computer the Librarian or a staff person will help them at that moment.

Technical Infrastructure-Resource Room and Library Work Area

IT Department has established a schedule for performing preventive maintenance by checking computers once per day, checking for system upgrades, installing new hardware and/or software. As stated above, IT Department monitors our networks, inspects hardware, perform prescheduled shutdowns for maintenance and upgrades and keeps up with any troubleshooting and repair needs.

Any work performed in Resource Room/work area using laptops are stored in backup system and Cloud. Besides having access to laptops, students and staff have access to WIFI, copier, scanner, projector, and headphones. Students and staff can use the Resource Room/Library Work Area for school work.

Access to LIRN (Library and Information Resources Network) and OliB is readily available for students and staff from their homes as well. The college's librarian is proficient in LIRN and OliB, and available Tuesdays and Fridays to assist students and staff.

A. Protection

To protect the network functionality from unwarranted malicious internet attacks, the college has intrusion detection and monitoring systems, such as USG (Unified Security Gateway), and network controllers for threat mitigation. The latest network technologies are deployed utilizing secure protocols to strengthen and eliminate threats against network assets.

Protecting intellectual property is a top concern for our team. That is why uploads and downloads of such material is strictly limited and supervised by college librarian/IT Coordinator. We have put in place safeguards to prevent infringements of national and international intellectual properties including software, books in digital format, audio and video materials, etc. Some of these safety measures include the following:

- 1) Enabling automatic antivirus scan before programs are loaded into our system.
- 2) Automatically deleting "cracking" software that attempts to violate copyright protection.
- 3) Limiting system administrative privileges to the IT Coordinator.
- 4) Never granting network administrative roles to students.
- 5) To secure student integrity and work area implemented a surveillance camera system.

B. Secure Wireless Network Access

Secure protocol wireless technologies are also deployed in the Resource Room/work area. This solution offers flexible wireless network access and security at a level similar to the traditional (wired) network.

C. Network Management Services

Using sophisticated tools (network controller) the IT staff monitors and manages the entire network in real-time. Infrastructure problems are alarmed and can therefore be observed as they occur. Ideally, the appropriate automated or manual solution is then dispatched before users become aware of a problem. This kind of automated systems management is critical for successful Resource Room and Library Work Area operation.

Effectiveness of Media Services

Quality, relevance, accessibility, availability, and delivery of resources and services, and their actual use by students, regardless of location, are major factors taken into account in evaluating the effectiveness of SABER College's media services. We have an established procedure for evaluating library resources and services which is based on the plan's purpose. Library assessment tools are specifically designed to measure the quality, relevance, accessibility, availability, and delivery of resources and services, as well as user satisfaction. Student opinion surveys invariably show a very high degree of satisfaction with the library. Many relevant data are gathered and reviewed on a regular basis, including materials circulated, attendance, questions answered, students served in library instruction sessions, and faculty requests granted.
