

Plan for Physical Resources and Technical Infrastructure

Purpose

The purpose of this plan is to ensure adequate operation, maintenance, and improvement of our facilities.

SABER College is housed in a building located at 3990 W. Flagler St., Miami, Florida. The campus occupies 15,273 square feet of physical space; it has access to convenient public transportation and parking facilities. The School is centrally air-conditioned and contains all needed modern equipment. It is made up of eight classrooms, one nursing skills lab/nursing simulation lab, two physical therapy labs, a library information resource service area with 40 laptops, and an adjoining library area where students can study that contains accessible paper books, an admissions office, a financial aid office, a reception area, a faculty working area, and administrative space.

Maintenance and Operation

SABER College wants to ensure that appropriate facilities are available in requisite quality and quantity. As the school expands, the availability of appropriate facilities in sufficient quality and quantity is critical. The recruitment and retention of students, faculty, and staff are affected by the condition of the facilities. Facilities are also important factors for all who visit the campus, for a lasting impression and a concept of the school's image may stem from a single visit. We must anticipate growth and provide facilities conducive to learning and academic maturation. We have a janitorial staff that will grow as the school grows. At the moment janitorial services are supervised by the Dean of Academic Affairs as well as a parking attendant to help with the parking situation. The college provides the equipment necessary for the janitorial staff to complete their job.

Safety:

All inspections and compliance with fire, health, and safety laws and regulations must be passed on a yearly basis. Any accidents are reported and investigated by the Dean and or the Director; they submit a full report to the administration.

Methodology

In order to keep the campus up to standards we:

1. 1. Provide adequate maintenance and upkeep for all facilities. In other words janitorial staff must clean the facilities, empty garbage cans, straighten desks, clean bathrooms, and replenish soap, and paper daily. This must also include a detailed cleaning once a month of doors, desks, and other furniture.
2. Develop a preventive maintenance program and ensure maintenance is completed as scheduled. At the moment our lease contract includes maintenance services for the common areas. Our building manager ensures that lighting, air conditioning, and physical structure is maintained.
3. Recruit and retain highly qualified personnel. We will need help in designing a facility that promotes learning, looks clean, and well kept.
4. In order to keep SABER College mainframe and network systems running efficiently, IT Department has established a schedule for performing preventive maintenance, system upgrades, installing new hardware and/or software. This includes monitoring our networks, inspecting hardware, performing prescheduled shutdowns for maintenance and upgrades and keeping up with any troubleshooting and repair needs.

Network**A. Protection and Privacy**

To protect the network functionality from unwarranted malicious Internet attacks intrusion detection and monitoring systems are in place for threat mitigation. The latest network security technologies are deployed utilizing secure protocols to strengthen and eliminate threats against network assets.

Protecting intellectual property, specifically against copyright infractions is

a top concern for our team. That is why uploads and downloads of such materials is strictly limited and supervised. We have put in place safeguards to prevent infringements of national and international intellectual properties including software, books in digital format, audio and video materials, etc. Some of these safety measures include the following:

- 1) Blocking and/or disabling USB ports for student stations in classrooms and labs.
- 2) Enabling automatic antivirus scan before programs are loaded into our system.
- 3) Automatically deleting “cracking” software that attempts to violate copyright protection.
- 4) Limiting system administrative privileges to only key personnel and the IT department.
- 5) Never granting network administrative roles to students or staff outside Those related with the IT department.

B. Security - Secure Wireless Network Access

Secure protocol wireless technologies are also deployed in school classrooms and administration offices. This solution offers flexible wireless network access and security at a level similar to the traditional (wired) network.

C. Network Management Services

Using sophisticated tools the IT staff monitors and manages the entire network in real-time. Infrastructure problems are alarmed and can therefore be observed as they occur. Ideally, the appropriate automated or manual solution is then dispatched before users become aware of a problem. This kind of automated systems management is critical for school operation.

The IT department logs, assigns, and tracks requests for assistance from inception to completion. Everyone has access to this support mechanism which has worked very well in resolving technology issues related to both software and hardware.

A very important part of our maintenance and troubleshooting protocol is to ensure, maintain and upgrade the skills and expertise of our team as well as the ongoing research and testing of new technologies and innovative software, systems strategies and tools.

All students benefit from this technology in their access to library resources including Olib and LIRN. These platforms have distance education infrastructures making it possible for the student to study away from the school. Our distance education students benefit from all these technology infrastructures, including the distance education students who have access to CANVAS and are able to reach their learning sites, through this platform.

All SABER furnishings and equipment are treated with care by its employees. We try to instill the same care in our students. For equipment that is used by students such as desks, computers, labs, printers, copiers etc. we ask them to treat it with care.

Methodology (Damage and Safety)

In the event of damage:

1. Students are to report the incident to their teacher.
 2. Teacher is to immediately contact their director, who will contact the Director of Executive Affairs and let him or her know about the damage. If a teacher is not present then the student must notify the director.
 3. The program director or The Director of Executive Affairs will then contact the administrative offices so they can conduct the procurement procedure.
 4. SABER's Director of Executive Affairs (DEA) keeps a record of all our furnishings and equipment. We take a look at areas that students use, to see if anything is damaged or needs to be replaced. If it does it is immediately reported to administration.
 5. Any equipment that needs to be fixed or replaced will be in an appropriate time frame.
 6. If student is not happy with equipment allow student to express their thoughts.
- College focuses at all times on the safety of our staff and students.

Long range campus improvement efforts.

1. Continue to provide adequate housekeeping for school building and facilities- full time housekeeping staff has been added to school services
2. Ensure that landlord provides adequate landscaping and green space around the campus.
3. Emphasize to students, faculty, and staff the need for collective efforts to keep our surroundings clean.
4. Make certain all areas have an adequate number of trash receptacles.
5. Maintain updated computers, printers and software.
6. Continue to contract full-time, in/house IT services.

Long Range Plan for projected new Campus:

Continue to enhance and expand physical facilities:

1. It is our goal to open up a branch area where there is room to expand, green space, and landscaping, sufficient class space, and administrative space.
2. The school will assess continuously the campus physical facilities and develop a multi-year plan to address necessary repairs, renovations, and other improvements. The intent is to identify and correct deficiencies that exist, to anticipate and correct potential problems before they can disrupt the mission of the campus.
3. The school will provide a professional environment conducive to teaching and learning.
4. The school will respond to changing technology requirements and changing expectations of students, faculty, and staff whether it is in our existing facility or our new one.
5. Continue to revise and update the School's Strategic Plan.
6. Provide adequate personnel to support new facilities.
